Legal disclaimer

General information only. Not an offer to sell or solicitation to buy securities, virtual assets, or any investment product. Not investment, tax, or legal advice. Forward-looking statements are subject to risk; protocol economics and token features may change or never launch. Terms of any transaction are governed only by signed documents.

一般性信息；不构成在任何司法辖区出售或要约购买证券、虚拟资产或投资产品的要约或诱引，亦不构成投资、税务或法律建议。前瞻性表述受风险影响；协议参数与代币安排可能变更或不再推出。交易条款仅以双方签署文本为准。

Fundraising snapshot (aligned with Deck & FAQ)

Dimension	External narrative (qualitative)
Stage	Demonstrable core path: market—orders—escrow—disputes/ratings—reputation—community/help in one flow. Public launch cadence and production domains follow published announcements and environment labels.
Near term	Pre-prod stability, partner integration, materials/roadshow cadence, compliance/disclosure (including forward-looking token path).
Metrics	No operating numbers on this page. GMV, orders, activity, escrow flow—after NDA + exports/reports ; roadshow explains mechanism and stage first; figures only after IR + Finance alignment and Legal clearance (verbal or separate table).
Smallest adoption fact (one line)	If any: one externally cleared, checkable fact (who/what + environment label + as-of date) via IR + Legal . If none: say “ No cleared external operating counts yet; conviction starts with the ~90s pack demo (same beat sheet as in-pack 04 Pitch Deck (PDF/PPTX) Appendix A), then NDA for tables. ”
Roadmap (four tracks)	Product: harden main chain fulfillment → Protocol: fee routing / governance modules by phase → Market: supply and channel pilots → Compliance: disclosure and permissions by jurisdiction. Quarterly detail—under NDA or in signed materials only; not a performance promise.

What TravelTrust is

A trust-oriented product system for travel: marketplace matching, orders, on-chain escrow, dispute handling, reputation, and community/help surfaces working as one structure.

Protocol brand TrustLayer may appear alongside TravelTrust—say in **two sentences**

“product vs protocol narrative” , don’ t mix terms mid-paragraph (same framing as in-pack 02 Executive Summary PDF).

How to read this page (first 30 seconds): we use **product-chain** language here for quick orientation; **on-chain escrow, allocatable fees, and governance boundaries** live in in-pack 02 Executive Summary PDF, the pitch deck, and in-pack 06 Whitepaper PDF. **Not “OTA + payments bolt-on”** : the core is an **auditable fulfillment state machine** (escrow—disputes—reputation) with optional **embeddability**, not swapping checkout rails alone.

Problems we address

1. Information asymmetry between parties.
2. Weak assurances after payment.
3. Unclear evidence, rules, and responsibility in disputes.
4. Reputation that rests on marketing instead of verifiable outcomes.
5. Gaps between users, suppliers, and long-term community care.

How we solve it (main chain)

1. Brand and landing for context.
2. Marketplace for supply/demand.
3. Orders and escrow, not one-off free-form payment.
4. Completion, ratings, or disputes under rules.

5. Reputation that reflects outcomes.
6. Community and help for feedback and education.

Strengths

1. **End-to-end product chain** across brand, market, orders, escrow, reputation, community, and help.
2. **Escrow & disputes** embedded in the flow.
3. **Reputation** that can reflect delivery outcomes.
4. **Long-term surfaces** for operations and education.

One line

TravelTrust is building a trust-based travel transaction network that combines marketplace matching, escrow, dispute handling, reputation, and community onboarding into one product system.

Where we are

We have a **demonstrable core product path**. Launch cadence and production domains follow **published announcements and environment labels**; do not describe as fully rolled out to the public without formal confirmation.

Boundaries

1. Landing pages are **not** subscription or solicitation pages for token issuance.

2. Do not conflate governance, return expectations, allocations, and corporate equity.
3. **No** fixed yield, principal protection, or corporate equity return promises.
4. Demo/staging environments are **not** automatically the same as announced production domains.
5. **Without TTG or before issuance:** travel orders still settle primarily via **allowlisted stable-type assets** in the escrow narrative; **protocol fees and embeddable rails** remain discussable—see 02 / 06.
