- 13. First touch for investors?
- 14. First touch for partners?
- 15. New community members?
- 16. Guide “staking” vs governance “staking” ?
- 17. Safest public narrative?
- 18. Why so few hard numbers on One Pager / Deck?
- 19. Are roadmap quarters a commitment?
- 20. What “hard data” can we get?
- 21. Where are you in a financing process?
- 22. Beyond this pack?
- 23. Do public materials argue “you must invest now” ?
- 24. Do you rely on bridges or external oracles?
- 25. Who can upgrade contracts or hit pause / emergency controls?

- 26. Is reputation “fully on-chain” ?
- 27. Are FeeRouter **100% / 45% / 55%** “how a travel order splits payment” ?
- 28. Isn’ t “Stripe / acquirer + escrow” enough?
- 29. Why chain at all (vs a company database + lawyers)?
- 30. Can we bolt together seven vertical SaaS tools instead?
- 31. If TTG isn’ t trip pay, how do we talk about “crypto upside” in public?

Legal disclaimer

General information only. Not an offer to sell or solicitation to buy securities, virtual assets, or any investment product. Not investment, tax, or legal advice. Forward-looking statements are subject to risk; protocol economics and token features may change or never launch. Terms of any transaction are governed only by signed documents.

一般性信息；不构成在任何司法辖区出售或要约购买证券、虚拟资产或投资产品的要约或诱引，亦不构成投资、税务或法律建议。前瞻性表述受风险影响；协议参数与代币安排可能变更或不再推出。交易条款仅以双方签署文本为准。

Cross-index to the Whitepaper (06)

Navigation only—**not** an offer or new disclosure. Figures, jurisdictions, and definitions: **in-pack 06 Whitepaper PDF**. “§” matches the numbered sections in that document.

FAQ #	Topic	Deeper read (06)
1	Definition & boundaries	§03 architecture · §07 TTG boundaries
2	What we are not / token framing	§07.2 · §11.4
3–4	vs travel platforms / vs Web3	§03 annex · §02.3 · §10.2
5–6	/traveltrust /market	§03 · §09 (entry + GTM narrative)
7–8	Orders & escrow path	§05 · §05 annex
9	Reputation surface	§10.1
10	Community & help	§09.2
11–12	Environments / launch wording	§11.1 · §12 · §02.4
13	First-read path	§13.3
14–15	Partners / newcomers	§09 (skim)
16	Staking rails	§07.2 · §05
17	Safest public	§13.2 · §11.5

FAQ #	Topic	Deeper read (06)
	narrative	
18	Numbers & policy	\$02.1 · \$13
19	Roadmap not a promise	\$12
20	Hard data / NDA	\$02.1 · \$13.4
21–22	Process / beyond the pack	\$13.4
23	No “invest now” pitch	\$02.4 · \$10.2
24	Bridges / oracles	\$11.2 · \$05
25	Upgrades / pause	\$11.2 · \$03
26	Reputation vs on-chain facts	\$10.1 · \$05
27	FeeRouter 100/45/55 vs trip settlement	\$06 · \$05 · \$11
28	Acquirers + escrow (Stripe-class)	\$1.3 · comparison table · \$05
29	Why chain is needed	\$1.3
30	Best-of-breed	\$10.2 · \$03; Pitch competitive matrix

FAQ #	Topic	Deeper read (06)
31	SaaS assembly TTG & "crypto upside" (public boundary)	\$07 · \$07.2; pack 07

How to read this FAQ: items **1–13** set definitions and entry surfaces; **14–23** cover process and compliance tone; **24–27** are short "technical honesty" checks for engineers and researchers (incl. fee-rail wording); **28–31** support partner-meeting depth Q&A (still not an offer).

1. What is TravelTrust?

A trust-oriented system for travel commerce: marketplace, orders, escrow, disputes, reputation, plus community and help. **On-chain Escrow, allocatable fee routing, and TTG (if any) boundaries** live in in-pack 02 Executive Summary PDF and in-pack 06 Whitepaper PDF.

2. What is TravelTrust not?

Not a token-first narrative project, and not a landing page with fundraising story only. **Guide performance staking vs governance/TTG**—see **item 16** below.

3. vs traditional travel platforms?

Stronger emphasis on post-payment escrow, fulfillment, disputes, and reputation—not just discovery and payment.

4. vs typical Web3 projects?

We start from travel settlement and fulfillment, not from token lore that retrofits a product.

5. What is /traveltrust?

Brand and project landing for positioning; **not** a subscription or solicitation page.

6. What is /market?

The marketplace entry for supply and demand.

7. Why orders & escrow matter?

Trust is tested **after** payment: escrow, confirmation, ratings, disputes must work as one chain.

8. What does an Escrow path signal?

A closed loop from order to outcome—not only content.

9. Reputation layer?

Helps outsiders see how trust outcomes are surfaced.

10. Community & help?

Long-term operations and user education surfaces.

11. Are all URLs production?

Demo and staging may be used for product and investor meetings; do not equate with fully public production unless announced.

12. Fully launched?

We have a demonstrable core path; public release cadence follows **published announcements and environment labels**.

13. First touch for investors?

If you start from the **pitch deck: Deck** → **in-pack 01 One Pager PDF (product spine)** → **this FAQ** → **live demo**; **governance, fee denominators, and TTG boundaries** are in in-pack 06 Whitepaper PDF (read the **Abstract** and **\$06** first, then expand as needed). Otherwise: **one-liner** → **one-pager** → **in-pack 04 Pitch Deck (PDF/PPTX) (matches machine-built deck)** → **demo** also works.

14. First touch for partners?

Market, order/escrow path, reputation logic, community/help.

15. New community members?

Landing, market, FAQ first; not complex governance or fundraising on day one.

16. Guide “staking” vs governance “staking” ?

Different. Guides: performance/onboarding mechanics. Governance: proposal/voting mechanics. Do not merge into one “staking coin” story.

17. Safest public narrative?

Trust-loop product system: market, escrow, disputes, reputation, community/help—no inflated launch claims, no impermissible return or equity promises.

18. Why so few hard numbers on One Pager / Deck?

Public materials emphasize **mechanism, stage, and policy**. Operating and financial figures need proper disclosure context; we share them **after NDA** with **traceable exports**, aligned by IR/Finance before meetings.

19. Are roadmap quarters a commitment?

No. Public language describes **direction and types of phase**. Binding obligations or investment terms require **signed agreements** under applicable law.

20. What “hard data” can we get?

Under confidentiality: metric tables, report excerpts, system exports—always with **environment** labels (demo / testnet / production). **Do not** present demo or test environments as full public production.

21. Where are you in a financing process?

As mutually discussed. **This FAQ does not describe live terms, valuation, or size.** Substantive terms belong in formal legal documents.

22. Beyond this pack?

Full DD and legal schedules are shared **as counsel agrees**; the public pack excludes cap tables, raw ledgers, and internal meeting notes.

23. Do public materials argue “you must invest now” ?

No. Not a subscription urgency pitch or performance promise. If asked why not wait a year, the public stance only explains why funds often discuss **structural windows** alongside **execution readiness** (fragmented distribution, disclosure expectations on fund paths, maturing rails, etc.)—see the “Timing” section in in-pack 02 Executive Summary PDF and §2.4 in in-pack 06 Whitepaper PDF. **06** also contains a searchable block titled “**public boundary related to ‘revisit in one year’ (qualitative)**” ; terms and cadence are governed by signed documents only.

24. Do you rely on bridges or external oracles?

Follow public releases and contracts. The whitepaper risk section states that bridges/oracles, **if used**, must sit inside security and audit scope (**06 §11.2**). **Do not verbally assume “live in prod”** for components not explicitly called out in public materials; confirm with environment labels and release notes, with engineering checklists under **NDA** if needed.

25. Who can upgrade contracts or hit pause / emergency controls?

Public stance is principles-only: **upgrade paths, keys, and multisig practice** must align with audit and governance processes (**06 §11.2, §08** roadmap narrative). **We do not list signer names or thresholds in this FAQ**; diligence should request runbooks, parameters, and change logs under **NDA**.

26. Is reputation “fully on-chain” ?

Hybrid model: on-chain anchors **verifiable fulfillment and fund-state facts**; discovery, retrieval, and parts of UX can live off-chain—see **06 §05** and **§10.1**. Do not verbally equate a “ratings UI” with “everything immutable on-chain.”

27. Are FeeRouter 100% / 45% / 55% “how a travel order splits payment” ?

No—that is not trip settlement. In public materials, **100% / 45% / 55%** only describe the **first-layer story for allocatable platform order fees** (FeeRouter). **Escrow principal for trips, traveler pay rails, and whether TTG is default checkout** are **not** defined by those three lines. **Gas, arbitration economics, and slashing** use **different denominators**—do **not** blend them into one spoken “payment split.” Details: **in-pack 06 Whitepaper PDF Section 06**.

28. Isn’ t “Stripe / acquirer + escrow” enough?

Not as a one-liner substitute for this product arc. Funds often mean **Stripe Connect**-class rails for **money-in / chargebacks / KYC**. TravelTrust’ s public story is a **travel-order** state machine across **quote → milestones → fulfillment → dispute → release**, with **evidence**, plus **separate disclosure rails** for **trip principal, allocatable platform fees (FeeRouter layer 1)**, and **governance (TTG)**. **One-line public boundary:** acquirer + custody answers “how money moves” ; it does **not** by itself ship a **single order ID fulfillment + dispute + reputation** stack. See **in-pack 06 Whitepaper PDF §1.3** and the **Web2 OTA / typical on-chain pay wallet / TravelTrust** comparison table.

29. Why chain at all (vs a company database + lawyers)?

The public claim is **crypto-native constraints** on **high-dispute-value** steps so release/refund and dispute paths are **third-party replayable** in principle (deployment/version per public releases). **One-line public boundary:** chain modules are not “a cooler database” ; they anchor **auditable execution boundaries** for the contested path —in-pack 06 Whitepaper PDF §1.3.

30. Can we bolt together seven vertical SaaS tools instead?

Rarely as a clean substitute for one travel-order spine. Point tools often cover **payments, ticketing, CRM, recon** separately while still missing a coherent **evidence → escrow → dispute → reputation** thread under **one trip order ID**; integration also carries **embed cutover + disclosure alignment + training** costs. **One-line public boundary:** read the Pitch **competitive matrix** slide; switching discipline in in-pack 06 Whitepaper PDF §10.2.

31. If TTG isn't trip pay, how do we talk about “crypto upside” in public?

Public pack: boundaries and tool roles only—no valuation multiples or “up-only” claims. TTG (if any) is framed around **governance voting/delegation and ecosystem-budget process—not** default checkout or Escrow settlement asset; keep it separate from guide-side staking rails (**FAQ #16**). **One-line public boundary:** do not verbally collapse **governance tooling** into a “trip yield coin” story; Web3-aware pack readers may open **07-Protocol-Tokenomics** alongside **06 §07**—still **not an offer**.
