

TravelTrust

Trip-order fintech

Custody · fulfillment · disputes for each trip order

Disclosures follow published releases and the Whitepaper (product/legal anchor)

Misread firewall: per-order trust + custody/disputes—not trip-pay plumbing, not mass-market OTA, not a token raise slide (same framing as Whitepaper §06 + FAQ).

Trip-order fintech: align delivery and disputes around each trip order.

Boundary: trip principal vs platform recurring revenue are disclosed separately; figures and terms follow the Whitepaper + NDA materials.

Why it matters (qualitative): fragmented distribution needs auditable order funds + fulfillment/dispute states—embeddable rails; no revenue forecast on these slides.

Why us anchor: trip funds / take / governance read on the same Whitepaper + FAQ sentences—not a generic pay-facade story.

Pain

Facts don't line up

Reconciliation drag; weak audit trail on disputes

Traveler vs platform order funds—who may release, unclear?

Trip-order: align delivery and disputes · customer journey / fulfillment loop (one trip; no fee unpack here)

Schematic: customer-journey fulfillment loop for one trip (read clockwise); detail in speaker notes / Whitepaper.

Protocol stack · control plane — order rules & responsibility slices

(same trip; rules/disclosure/env; not a second journey slide)

Why now (qualitative)

Demand: be real, not loud. (structure: Whitepaper §2.4)

Supply: reputation travels; align releases to published communications + labels

Regulatory: don't mix traveler order funds state with platform earnings. (Whitepaper)

Window: splintered channels—align delivery first, then distribution. (same section) Replay anchor: published §06 refs + release dates + environment labels.

Three lines to remember

Platform take is ours; order funds state isn't.

Governance signal: votes, not trip pay.

Disclosure cadence: published releases + version/env labels
(details: Whitepaper). · Moat leans on replayable disclosure +
recon.

One order: delivery aligned?

One order: book through to aligned delivery?

Scope: follow published releases and environment labels.

Materials: FAQ + Whitepaper; keep published 45/55 allocatable-fee split verbally separate from chain ops fees / penalties.

System strengths

(qualitative view: embeddable trust stack; moat in disclosure & reconciliation)

Fulfillment · order alignment · delivery & disputes · clear resolution · published releases/labels

Published path · disclosure boundary

(outer-ring disclosure | FeeRouter — published fee routing | on-slide published path only)

Disclosure boundary schematic (not a profit split; not trip-pay or token-raise plumbing; on-slide published path only) · Non-real-time settlement layer-1; orthogonal to gas / arbitration / slashing (see notes + Whitepaper).

Roadmap & timing (qualitative)

Shape: disclose → pilot → expand (qualitative; no dated promise)

Product: core path capability iteration (qualitative)

On-chain: roll out by country/environment—published releases + environment labels

GTM: channel pilots aligned to disclosure cadence (pilot names only as already published—replayable)

Compliance & ops cadence: quarterly metrics and internal milestones under NDA

Go-to-market

Supply: KYB + fulfillment + training

Demand: disclosure + channel pilots

Channels: spell out channel pilots · order funds state separate

Wedge: guide/DMC regional pilots first (qualitative; disclosure tracks published releases + labels); stage win = pilots + disclosure cadence auditable together

Competitive matrix (qualitative)

Web2	On-chain	TravelTrust
weak disputes Pattern: recon pain; weak auditable disputes	no fulfillment stack Pattern: travel order state + custody rarely integrated	fulfillment stack Pattern: evidence + escrow + disputes in one integrated trip-order flow

Switching cost: disclosure, recon, support, embed cutovers—see §10.2; not overnight.

“Seven best-of-breed SaaS” bolt-ons: rarely one **trip-order spine** (evidence→escrow→dispute→reputation); see pack **FAQ #30**.

Disclosure: follow the published Whitepaper; line-item tables in the NDA room

Narrative journey

Alex↔Sam (pseudonyms): milestones & quote → escrow visible

Fulfillment proofs and release / ruling branch

Non-real-time settlement footnote (denominators: Whitepaper)

Teaching case—not one live order

Asks & next conversation

Asks: trust · fulfillment · ecosystem

Disclosure & cadence: published releases + environment labels

Next: platform vs rails can be discussed in parallel; quant + legal text after NDA

After the meeting: FAQ → Whitepaper (keep published 45/55 split verbally separate from chain ops fees / penalties)

“DD delta” index (under NDA): \$06 cross-walk + env matrix + channel pilot list—index only; no undisclosed figures on this slide.
