

Protocol economics & token boundary (overview)

TravelTrust · Investor Relations · Release 1.3

General information only. Not an offer to sell or solicitation to buy securities, virtual assets, or any investment product. Not investment, tax, or legal advice. Forward-looking statements are subject to risk; protocol economics and token features may change or never launch. Terms of any transaction are governed only by signed documents.

Legal disclaimer

General information only. Not an offer to sell or solicitation to buy securities, virtual assets, or any investment product. Not investment, tax, or legal advice. Forward-looking statements are subject to risk; protocol economics and token features may change or never launch. Terms of any transaction are governed only by signed documents.

1. Boundary (aligned with investor Whitepaper)

Order Escrow principal is separate from protocol fees and treasury flows; settlement uses allowlisted stables.

Governance token (if any) is for protocol governance and ecosystem budgeting—not default travel payment.

A token may never launch; mechanics are forward-looking only.

2. Allocatable fee routing (published percentages)

Allocatable platform fees entering FeeRouter close to 100%; excludes user-paid L1/L2 gas.

First layer (illustrative): national/regional bucket ~45%; Global Pool ~55%.

Internal Global splits (incentive, reserve, ops) follow the executed economics addendum—not expanded here.

Arbitration fees and performance slashing use different denominators—do not merge into one pie.

3. Protocol layering (for diligence dialog)

Experience & growth: market, orders, community, help.

Application & orchestration: APIs, state machine, dispute/escrow linkage.

Settlement: Escrow and release rules.

Economics: order fees → FeeRouter (separate lane from governance agenda).

Governance (roadmap): timelock, vote/delegate, parameter changes.

4. Three-ledger mnemonic (no new percentages)

Escrow ledger: traveler principal and release conditions.

Fee-router ledger: allocatable platform fees only; separate from arbitration/slashing denominators.

Governance/treasury ledger: parameters and budgets; TTG (if any) does not co-mingle per-order principal.

5. TTG boundary (aligned with investor whitepaper)

Votes, delegation, ecosystem budgeting; not default travel payment; not Escrow settlement.

May never launch; supply/unlocks follow final disclosures.

6. Sample DD prompts

Are Escrow, FeeRouter, and treasury flows shown on separate slides/ledgers?

Are dispute fees footnoted away from the 45%/55% first-layer story?

Which shipped release is authoritative for RegionVault / timelock / governor?

Travel deal loop (vector)

Aligned with public one-pager narrative

Schematic: single-trip loop (read clockwise); detail in speaker notes / Whitepaper.

Protocol stack (vector)

Five-layer reference for diligence

1	Find
2	Book
3	Align delivery
4	Handle issues
5	Published disclosures

FeeRouter layer 1 (vector)

Only published 100% / 45% / 55%

Non-real-time settlement terms; orthogonal to gas / arbitration / slashing (see notes + WP)

Capital-flow boundary (vector)

Escrow / allocatable fees / governance — no new parameters

Trip-order principal

Travel principal and release path; isolated from fees and governance flows.

Allocatable fees

Protocol economics; 100% closure (layer-1 disclosure-45% / 55% as above).

Governance token

If any: parameter and budget votes; not default travel payment; may never launch.
